

Please DO NOT ACCEPT RM-10352. I'm against for the following reasons:

1.) A division of narrow and wide modes would give privileges to use of narrow modes, including digital modes of the future against SSB modes. CW will have all the band when SSB users will have only part of the band. This is unfair.

2.) A bandplan will originate More FCC involvement and resources used for 160-meters because it would cause more disputes and conflicts between operators asking for FCC involvement.

5.) 160-meters can't have the same basic structure as other bands below since there are less users, is a night time band only and used ONLY (mainly) in winter time.

We , (a big 160 meters users in Florida) have lots of noise all year around and the banplan would be a big disadvantage.

Miguel Mazquiaran, N4UTO
